DETAILED ACTION

Information Disclosure Statement

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered, namely JP 10-30520.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 1771

3. Claims 1-7 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over the claims of copending Application No. 10/297173, 11/000007 & 11/014779. Although the conflicting claims are not identical, they are not patentably distinct from each other because they all appear to be obvious variants of one another.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims language appears awkward and doesn't make sense. Particularly, when describing that the thermoset resin layer has porosity and that porosity makes it a cleaning layer. Is Applicant telling us that any thermoset resin, which has pores, is a cleaning layer? Please clarify.

6. In claim 6, the language "A transfer member" lacks antecedent basis from the claims, which it depends upon.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1771

8. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by EPO 0 930 538 A1 issued to Nitto Denko Corporation.

9. EPO 0 930 538 A1 issued to Nitto Denko Corporation (appears to be the same assignee as Applicant) discloses a cleaning tape for use in cleaning transport surfaces comprising a tape body, upon one side lies an adhesive layer atop of which lies a porous screen (abstract). The porous screen protrudes from a surface of the adhesive layer so that the cleaning tape can show substantially no tackiness [0008]. The tape body can be formed from polyethylene terephthalate [0017], plastic, polypropylene, vinyl chloride, resin impregnated paper, synthetic paper [0018] some of which are described by Applicant in their instant specification which alludes one to think that they are equivalent thermoset resins. The materials used for the adhesive layers may include synthetic rubbers including acrylic styrene, silicon and natural rubbers [0021]. The porous screen used is usually a knitted fabric made of polyester [0024].

Furthermore, in claim 7 there are no method limitations other than conveying (using) the composite and thus it has been treated as an article claims.
